Instruction 871-786

Model 13854

WARNING!

WARNING!!! THIS PRODUCT IS DESIGNED TO APPLY CHEMICALS THAT MAY BE HARMFUL AND COULD CAUSE SERIOUS PERSONAL INJURY IF INHALED OR BROUGHT INTO CONTACT WITH THE USER. FAILURE TO READ AND FOLLOW OWNER'S MANUAL INSTRUCTIONS BEFORE USE AND/OR MISUSE OF THIS PRODUCT COULD RESULT IN EXPLOSIVE FAILURE WITH MAJOR INJURIES.

MAIN FUNCTION

This Neverpump™ Bak-Pak® sprayer is a highly-efficient sprayer, suitable for controlling pests in crops, flowers and gardens, epidemic controlling of livestock and poultry houses, and sanitation of public places. Powered by a 12V/10Ah battery, this sprayer saves labor time and attains 3 to 4 times more efficiency than a manual sprayer. This sprayer can be operated continuously for up to 10 hours and spray 110 gallons of liquid after one full charging-which consumes only 0.3 kwh of electricity.

STRUCTURE OF SPRAYER

Structure: This sprayer consists of a sprayer, base, battery, mini-pump, charger, spraying system, rubber tubes, switch, spraying rod, nozzle and strap.

FEATURES

1. Smooth and streamline appearance. The sprayer is ergonomically designed to conform to the human back, making it easy to carry.
2. The sprayer comes with a mini-diaphragm pump which is compact in size, light-weight, creates high pressure and has an extended service life. It features a pressure protection switch to prevent over-pressurization.
3. Triple screens prevent foreign matter or particles from clogging the nozzle. The screen is uniquely designed to allow easy dismantling and cleaning.
4. This sprayer has an under-voltage alert circuit. An alarm will sound when the voltage of the battery decreases to 10.5 Volts. This will protect the battery. The supplied charging socket can be used as a 12 Volt power supply in addition to a charging unit.
5. Special charger features intelligent three section charging (constant current/constant voltage/maintenance) and short-circuit/over current/inverse-connection protection. The indicator lamps of charger: RED-charging; GREEN-charged/stand-by.

OPERATION

Be sure to charge the battery sufficiently prior to operation. Fill the sprayer with prepared liquid through the screen and close the sprayer cover. Turn on the power switch and grip the switch handle to start spraying. Either instant or continuous spraying is allowed.

Three kinds of nozzles are supplied for your spraying needs.

1. **Fixed Conical Pattern Nozzle:** This nozzle sprays uniform mist on target. Designed for spraying pesticides. Follow the wind and move in a parallel manner one side while spraying.

2. **Misting Cone Nozzle:** Best for controlling of pests. Follow the wind and move in a cross manner on one side while spraying.

3. **Four-hole adjustable nozzle:** Best for spraying of high plants and fruit trees. However, it may result in significant loss of pesticide, since it covers a wider area.

PARAMETERS AND SPRAY-HEAD FLOW RATE

1. Type: Neverpump® Bak-Pak® Sprayer

4. Size: 40 x190 x 555mm

2. Pump: mini-diaphragm

5. Capacity: 15 liters

3. Charger: Input AC100-240v
50/60hz, Output DC12v 2a

6. Net Weight: 7.4kg

7. Battery: 12v10ah (fully enclosed, maintenance free)
Max. Pressure: 0.4-0.45Mpa

POINTS FOR ATTENTION

Spraying nozzle type	Pressure Mpa	Flowrate L/min	Spraying nozzle type	Pressure Mpa	Flowrate L/min
Adjustable Cone Nozzle	0.29-0.32	0.7-0.8	Double Conical mist nozzle	0.17-0.18	1.6-1.7
Fixed Conical Pattern Nozzle	0.16-0.17	1.2-1.3			
Four-hole adjustable nozzle	0.27-0.28	0.8-0.85			

1. The battery has been charged before being delivered. However, it will self-discharge in the course of transportation and storage. Additional charging before initial use is required.
2. Try your best to avoid operating the sprayer without water in it. This may damage the diaphragm. Never place the sprayer upside down. Otherwise, the battery may be damaged.
3. In case a noise is heard from inside the sprayer, or poor atomization occurs after long periods of use, the sprayer may have a low battery voltage and requires charging. Connect the plug to an electrical outlet without removing the battery from the sprayer. A charging time of at least 8 hours is required. The charger should be placed in a dry, well-ventilated safe place.
4. Trial spraying with clean water is necessary for initial use-to make sure neither leakage or poor atomization occurs.
5. There are a few points the user should remember while spraying. Wear a mask and gloves to protect skin and to avoid direct contact with pesticides or harmful liquids. Never spray pesticides against the wind or spray towards humans, animals or food. Never operate for extended periods of time under high temperatures. Strict compliance with safety instructions of pesticides is required. Never operate with strong acids, strong bases or flammable liquids. Never use high-resistant and very toxic pesticides for pest controlling purposes on vegetables, fruit trees, and plants.
6. For short-term use, charging is not usually required. For long-term storage, regular full discharging and recharging are required, with an interval of 2 weeks, a month, or two months, to ensure the service life of the battery.
7. Don't operate sprayer in temperatures exceeding 100 degrees or lower than 35 degrees.
8. After use for half a year, you should dismantle the base and check whether the screws are loose. If they are loose, please tighten them. Also, be sure to switch off power before storage.
9. It is strictly prohibited to keep this sprayer near fire or expose base to water or immerse the sprayer in the water to clean or to fill it with water. Unauthorized removal of the charger's housing is prohibited.

TROUBLESHOOTING

PROBLEM	CAUSE	SOLUTION
The motor fails to start after being powered on.	<ul style="list-style-type: none"> • The power cable has come off • The battery needs recharging • The power switch has been damaged 	<ul style="list-style-type: none"> • Dismantle the base to connect the cables soundly. • Charging • Replace the switch
Abnormal sound heard in the motor.	<ul style="list-style-type: none"> • The fastening screws for the pump are loose 	Tighten the screws.
Leakage occurs to the bottom of the base.	<ul style="list-style-type: none"> • The inlet and outlet tubes of pump break or are loose at the connection 	<ul style="list-style-type: none"> • Dismantle the base and tighten the tube clamps.
Poor atomization.	<ul style="list-style-type: none"> • The spraying hole was clogged • Spraying hole and o-ring worn • Seal is upside down • Filter screen was clogged • Leakage occurred to tubes at joints • Battery short of power • Air remained in the pump 	<ul style="list-style-type: none"> • Remove foreign matter • Replace o-rings • Correct by reversing • Clean with clear water • Tighten screws • Alarm maybe out of order, replace it, charge. • Remove the nozzle or extension rod to discharge the air
